Securing SaaS at Scale
The Power of AppOmni and CrowdStrike Falcon Next-Gen SIEM

The Challenges of SaaS Security at Scale

Managing security across a growing SaaS landscape introduces significant complexity. The continuous flow of user data, audit logs, and frequent configuration changes increases potential vulnerabilities. Traditional SIEMs often struggle to efficiently process the scale and variety of SaaS data, resulting in slower detection, higher costs, and greater security risks. As SaaS adoption accelerates, a scalable solution is required to effectively address these challenges and safeguard critical data.

CrowdStrike Falcon Next-Gen SIEM and AppOmni: The Complete SaaS Security Solution

Integrated for Enhanced Threat Detection

Seamlessly integrated with CrowdStrike, AppOmni monitors SaaS application security postures and detects anomalies across your SaaS environment. Our solution normalizes audit logs into a common ECS schema, delivering a consistent and clear view of SaaS activities within CrowdStrike's Falcon Next-Gen SIEM.

SCALE CHALLENGES

- Ineffective threat detection and response

- Reactive compliance management

- Scaling security leads to increasing costs

- No visibility across SaaS apps

FALCON NEXT-GEN SIEM AND APPOMNI BENEFITS

- Enhance your CrowdStrike Falcon Next-Gen SIEM with seamless SaaS insights

- Access pre-built dashboards for rapid threat response

- Stay ahead of configuration drift and unauthorized changes

- Easily monitor all business-critical SaaS platforms

Proactive Insights with Custom Dashboards

Access tailor-made dashboards for visualizing SaaS events and alerts, available directly from the CrowdStrike GitHub community repository. With these powerful visual tools, security teams can quickly identify and respond to potential threats within their SaaS ecosystems.
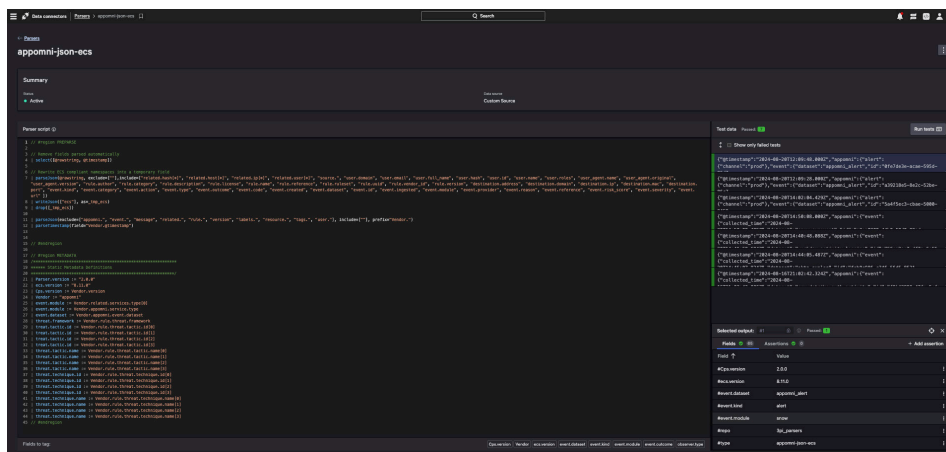

CrowdStrike Marketplace: Ready-to-Use Parsers

Leverage AppOmni's parsers, available on the CrowdStrike Marketplace, to streamline SaaS event analysis. These parsers simplify the ingestion and interpretation of SaaS audit logs, enabling faster, more effective threat detection and response.

Comprehensive SaaS Monitoring

AppOmni empowers organizations by providing robust monitoring for the most widely used SaaS applications, including Salesforce, ServiceNow, M365, and Workday. From detecting configuration drift to identifying unauthorized user additions or new policies, AppOmni ensures your SaaS environment remains secure and compliant.

Ensure your SaaS applications are secure with AppOmni and CrowdStrike – your trusted partners in SaaS security.
